WA320-5

HORSEPOWER
Gross: 127 kW 170 HP / 2000 rpm
Net: 124 kW 166 HP / 2000 rpm

OPERATING WEIGHT
13590 – 13780 kg
29,960 – 30,380 lb

BUCKET CAPACITY
2.3 – 3.2 m³ 3.0 – 4.2 yd³

WHEEL LOADER

Photo may include optional equipment.
Komatsu-integrated design offers the best value, reliability, and versatility. Hydraulics, powertrain, frame, and all other major components are engineered by Komatsu. You get a machine whose components are designed to work together for higher production, greater reliability, and more versatility.
Powerful and Low Emission
Komatsu SAA6D102E-2 engine

- Full side opening gull-wing engine doors
- Radial sealed air cleaner
- Swing-out hydraulic radiator fan
- Side-by-side type coolers for easy access and cleaning
- Overrun protection system
- Ground level servicing and fluid checks
- Extremely low fuel consumption
- Flat face “O-ring” hydraulic seals for extended life
- Staircase-type steps with large rear-hinged doors
- Sealed connectors

Photos may include optional equipment.
High Productivity and Low Fuel Consumption

**Powerful and Low Emission Engine**
A powerful Komatsu SAA6D102E-2 turbocharged air-to-air aftercooled diesel engine provides an output of 124 kW (166 HP) for the WA320-5. This engine is U.S. EPA Tier 2 and EU Stage 2 emissions certified.

**Low Fuel Consumption**
The fuel consumption is reduced up to 15% *due to the high-torque engine and HST with maximum efficiency in the low-speed range.

*V-shape loading (25 sec. cycle time)

**Electronically-controlled HST Using a 1-pump, 2-motor System**
- The 1-pump, 2-motor system allows for high-efficiency and high tractive effort. Engine power is transmitted hydraulically to a transfer case, then manually out to the differentials and out to the four driving wheels.
- HST provides quick travel response and aggressive drive into the pile. The variable displacement system automatically adjusts to the tractive effort demand to provide maximum power and efficiency.
- Full auto-shifting eliminates any gear shifting and kick-down operation to allow the operator to concentrate on digging and loading.

- When high drive torque is needed for digging, climbing or initiating movement, the pump feeds both motors. This combination makes the loader very aggressive and quick.
- Under deceleration, the HST system acts as a dynamic brake on the mechanical drive system. The dynamic brake can hold the loader in position on most workable slopes. This can be an advantage in stockpiling and ramp loading.
- As the machine moves and gains ground speed, the torque demand decreases and the low speed motor is effectively removed from the drive system by a clutch. At this point, the flow is going to the high-speed motor and the low-speed motor is not causing a drag on the system.
- An inching pedal gives the operator excellent simultaneous control of his travel and equipment hydraulic speeds. By depressing the inching pedal, drive pump flow to the motors will decrease, reducing ground speed and allowing the operator to use his accelerator to increase flow to his equipment hydraulics. Depressing the inching pedal further will activate the service brakes.
**Electronically-controlled HST with Variable Shift Control System**

The operator can choose between first, second, third or fourth maximum speeds by dialing the speed range selector switch.

For v-cycles, the operator can set the speed control switch to 1 or 2, which will give him aggressive digging, quick response and fast hydraulics. For load and carry, he can select 3 or 4 which will still give aggressive digging but with much faster travel speed.

The variable shift switch allows the operator to adjust his machine speed in confined v-loading applications. When in 1, the operator can adjust his travel speed using the variable shift switch to match his machine speed and hydraulics to the distance he must travel.

**Traction Control System**

In limited traction situations where the operator would like to avoid tire slippage (Such as sandy or wet surface operations), he can automatically reduce slippage by activating the traction control feature. Putting the traction control switch in the “ON” position limits the maximum amount of tractive effort. Traction control will be an advantage in certain applications such as transfer stations where the loader may be working on slippery concrete.
Main Monitor - Equipment Management Monitoring System
Komatsu’s main monitor keeps the operator informed of all machine functions at a glance. The monitor is located behind the steering wheel and displays various different machine functions including fluid/filter change intervals and troubleshooting memory display functions. The main gauges are analog type for easy viewing and other functions utilize light symbols or Liquid Crystal Display (LCD) readouts.

Swing-out Radiator
The Komatsu cooling system is isolated from the engine to provide more efficient cooling and low noise. The swing-out hydraulic fan allows the operator to quickly clean out the cooling system. The radiator, air-to-air cooler and oil cooler are mounted side-by-side for more efficient cooling and easy cleaning. A fully-opening, gas spring assisted rear grill gives the operator excellent access to the swing-out fan and coolers.

Full Side-opening Gull-wing Engine Doors
Ground level engine service and daily service checks are made easy with the gas spring assisted full side opening gull-wing doors.

Extended Service Interval
Extended engine oil service interval:
250 H → 500 H
Extended drive shaft greasing interval:
1,000 H → 4,000 H

Overrun Prevention System
When the machine descends a slope of six degrees or less, maximum travel speed is automatically restricted to approximately 42 km/h 26 MPH, for safety protection against damage of power train components and brakes by sensing the travel speed and controlling the discharge amount of the HST pump and motor. When the machine descends a steep slope and the travel speed reaches 40 km/h 25 MPH, the caution lamp lights up to inform the operator to reduce the travel speed.

Note: When the machine descends a steep slope, the use of the service brake is necessary to limit travel speed.
Fully Hydraulic Wet Multiple-disc Service Brakes

The dual wet multiple-disc brakes at each wheel are fully sealed and adjustment free to reduce contamination, wear and maintenance. The result is lower maintenance costs and higher reliability.

Added dependability is designed into the braking system by the use of two independent hydraulic circuits, providing hydraulic backup should one of the circuits fail.

If the brake oil pressure drops, the warning lamp flashes and the warning buzzer sounds intermittently.

The parking brake is mechanically controlled by a lever in the cab.

Flat Face-to-face O-ring Seals

Flat face-to-face O-ring seals are used to securely seal all hydraulic hose connections and to prevent oil leakage.

Cylinder Buffer Rings

Buffer rings are installed to the head-side of the hydraulic cylinders to lower the load on the rod seals, prolonging cylinder life by 30% and maximizing overall reliability.

Cathion Electrodeposition Primer Paint/Powder Coating Final Paint

Cathion electrodeposition paint is applied as a primer paint and powder coating is applied as a topcoat to the exterior metal sheet parts. This process results in a durable rust-free machine, even in the most severe environments. Some external parts are made of plastic to provide long life and high impact resistance.

Sealed Connectors

Main harnesses and controller connectors are equipped with sealed connectors providing high reliability and dust and corrosion resistance.

Komatsu Components

Komatsu manufactures the engine, transfer case, differentials and electric parts on this wheel loader. Komatsu loaders are manufactured with an integrated production system under a strict quality control system.

High-rigidity Frames

The front and rear frames along with the loader linkage have high rigidity to withstand repeated twisting and bending loads to the loader body and linkage. Both the upper and lower center pivot bearings use tapered roller bearings for increased durability. The structure is similar to those of large sized loaders and the reinforced loader linkage ensures high strength.
Cab Layout
Komatsu’s cab layout provides the operator with a roomy, quiet and efficient work environment. The loader controls are ergonomically designed to reduce operator fatigue and increase productivity.

Two Door Walk-through Cab
Entry and exit into the Komatsu cab starts with sloped staircase type steps and large diameter handrails for added safety and comfort. The large cab doors are rear-hinged to open 130 degrees offering easy entry/exit and will not hamper visibility when operating the machine with the doors latched open. A wide pillar-less flat glass provides for excellent visibility. The wiper arm covers a large area to provide great visibility even on rainy days.

Low-noise Design
The large cab is mounted with Komatsu’s unique ROPS/FOPS (ISO 3471/ISO 3449) viscous mounts. The low-noise engine, hydraulically driven fan, and hydraulic pumps are mounted with rubber cushions, and the cab sealing is improved to provide a quiet, low-vibration, and comfortable operating environment. Pressurization in the cab keeps dirt out further enhancing the operator’s comfort.

Easy-to-operate Loader Control lever
A lever using PPC allows the operator to easily operate the work equipment, to reduce operator fatigue and to increase controllability. The adjustable wrist rest provides the operator with a variety of comfortable operating positions.

Electrically Controlled Directional Lever
The operator can change direction with a touch of his fingers without removing his hand from the steering wheel. Solid state electronics makes this possible.
Tiltable Steering Column
The operator can tilt the steering column to allow maximum comfort and control. The two-spoke steering wheel allows maximum visibility of the monitor panel and forward work environment.

Comforts of Home
The large cab allows room for a large lunch box holder, a variety of cup holders storage area. Standard air conditioning and the optional AM/FM radio system create a comfortable and controlled work environment.
**ENGINE**

- Model: Komatsu SAA6D102E-2
- Type: Water-cooled, 4-cycle
- Aspiration: Turbocharged, and air-to-air aftercooled
- Number of cylinders: 6
- Bore x stroke: 102 mm x 120 mm (4.02" x 4.72")
- Piston displacement: 5.86 ltr (359 in³)
- Governor: Mechanical, all-speed control

**Horsepower**
- SAE J1995: Gross 127 kW (170 HP)
- ISO 9249/SAE J1349: Net 124 kW (166 HP)

**Transmission**

<table>
<thead>
<tr>
<th>Speed</th>
<th>Forward (km/h)</th>
<th>Reverse (km/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st**</td>
<td>4.0 - 13.0 km/h</td>
<td>2.5 - 8.1 mph</td>
</tr>
<tr>
<td>2nd</td>
<td>13.0 km/h</td>
<td>8.1 mph</td>
</tr>
<tr>
<td>3rd</td>
<td>18.0 km/h</td>
<td>11.2 mph</td>
</tr>
<tr>
<td>4th</td>
<td>38.0 km/h</td>
<td>23.6 mph</td>
</tr>
</tbody>
</table>

*Measured with 20.5 - 25 (L-3) tires
**1st speed can be set variably

**Brakes**
- Service brakes: Hydraulically-actuated, wet multiple-disc brakes actuate on four wheels.
- Parking brake: Wet multiple-disc brake on transfer output shaft.
- Secondary brake: Parking brake is commonly used.

**Steering System**
- Type: Full-hydraulic power steering independent of engine rpm
- Minimum turning radius at the center of outside tire: 5160 mm (16'11")

**Axles and Final Drives**
- Drive system: Four-wheel drive
- Front: Fixed, semi-floating
- Rear: Center-pin support, semi-floating
- Reduction gear: Spiral bevel gear
- Differential gear: Torque proportioning
- Final reduction gear: Planetary gear, single reduction

**Hydraulic System**

- Relief valve setting:
  - Loader: 210 kg/cm² (20.6 MPa)
  - Steering: 210 kg/cm² (20.6 MPa)

- Hydraulic cylinder capacities:
  - Loader and steering: Double-acting, piston

**Bucket Controls**

- The use of a PPC hydraulic control valve offers lighter operating effort for the work equipment control levers. The reduction in the lever effort and travel makes it easy to operate in the work environment.

**Control positions**
- Boom: Raise, hold, lower, and float
- Tilt-back, hold, and dump

**Service Refill Capacities**

### Additional Details
- **WHEEL LOADER** WA320-5
- **DIMENSIONS**
- **B.O.C.:** Bolt-On Cutting edge
- ***:** At the end of tooth or B.O.C.
- ****:** Bucket at carry, outside corner of bucket.
- All dimensions, weights, and performance values based on SAE J732c and J742b standards. Static tipping load and operating weight shown include lubricant, coolant, full fuel tank, ROPS (ISO 3471) cab, air conditioner (A/C), additional counterweight and operator. Machine stability and operating weight affected by counterweight, tire size, and other attachments.
### STANDARD EQUIPMENT

- Air conditioner with heater/defroster/pressurizer
- Alternator, 24 V/60 A
- Automatic boom kickout
- Axles, semi floating with torque proportioning
- Back-up alarm
- Back-up light, rear
- Batteries, 2 x 12 V/112 Ah
- Bucket positioner, automatic
- Cab [ROPS/FOPS (ISO 3471/ISO 3449)] with adjustable wrist rest, cigarette lighter/ash tray, dome light, front (intertentt) wiper/washer, rear view mirrors (2 outside, 1 inside), right hand and left hand door access with steps, sun visor
- Counterweight
- Differentials, torque proportioning
- Engine, Komatsu SAA6D102E-2
- Engine shut-off system, electric
- Engine water separator
- Equipment management monitoring system
  - Gauges (Speedometer, engine water temperature, fuel level, HST oil temperature)
  - LCD displays (Filter/oil replacement time, HST selection, odometer, service meter, trouble shooting)
  - Lights (Axle oil temperature, battery charge, brake oil pressure, central warning, directional indicator, engine oil pressure, engine pre-heater, HST oil filter clogging, high beam, maintenance, parking brake reminder, parking brake warning, steering oil pressure, transmission speed range, turn signals)
  - Fan, hydraulic driven, swing out
  - Fenders, front
  - Floor mat
  - Hard water area arrangement
  - Horn, electric
  - Lift cylinders and bucket cylinder
  - Lifting eyes
  - Lights
    - Stop and tail
    - Turn signal (2 front, 2 rear)
    - Working (2 front, 2 rear, 2 outside cab)
  - Loader linkage with standard lift boom
  - Maintenance monitor panel
  - Parking brake, wet multiple-disc
  - PPC fingertip control, two levers

**KOMTRAX**

### OPTIONAL EQUIPMENT

- 3-spool valve, lever, piping
- Auxiliary steering
- Bucket, excavating, 2.3 m³ 3.0 yd³
- Bucket, stockpile, 2.8 m³ 3.7 yd³
- Bucket, light material, 3.2 m³ 4.2 yd³
- Bucket teeth, bolt-on
- Cold area arrangement
- Counterweight, additional
- Cutting edge, bolt-on, reversible
- Fire extinguisher
- Heater and defroster
- KOMTRAX
- Power train guard
- Pre-cleaner
- Radio, AM/FM
- Rims only, less tires
  - Fits 20.5-25 tires
- Seat, vinyl, suspension, reclining
- Tool kit
- Tires (Bias ply)
  - 20.5-25-12PR (L-2)
- Vandalism protection kit
